

Freetown – July 2021

Eversource held a call with the group members June 7th to discuss the results of the steady state analysis. Eversource is working on the PSCAD dynamic analysis. We had hoped to share dynamic analysis results in July, but the complexities of PSCAD analysis have delayed this and we now expect to share results in August.

Eversource's intention is to keep all customers regularly informed (at least monthly) on the progress and discuss any significant risks or concerns Eversource encounters during the analysis. Factors that may impact the completion schedule and associated activities include but are not limited to: base case modeling issues; DER stability model issues; solution development for potential adverse system impacts; and/or significant Member Impact changes requiring review.

Eversource expects to provide results to customers this Fall.
